Executive Summary

System Capacity & Care Load Analytics for Unaccompanied Children

Dataset coverage: 720 reporting records from 2023-01-12 to 2025-12-21; reporting dates are irregular.

Key descriptive results

• Mean CBP custody: 171
• Mean HHS care: 6,061
• Mean combined load: 6,233
• Peak combined load: 11,762 on 2023-12-20
• Mean transfers per record: 128.7
• Mean HHS discharges per record: 173.4
• Mean simplified net HHS intake: -44.7
• Positive net-intake records: 33.1%

Interpretation

These figures describe the supplied observations; they do not establish overcrowding, inadequate care, or causal drivers. Missing calendar dates and differences between flow counts and snapshot counts affect interpretation.

Recommended next steps

1. Improve reporting completeness and publish metric definitions.
2. Add staffed capacity, occupancy, staffing, acuity and placement-wait measures.
3. Validate alert thresholds before operational use.
4. Keep stock and flow measures distinct.
5. Verify findings with official documentation and experts.

Deliverable: interactive Streamlit dashboard with filters, trend charts, KPI cards and CSV export.
